WORK IN PROGRESS... TWO BIG NEWS ARE COMING SOON

MAT300

**LIQUID WATERPROOFING
SOLVENT BASED**

- ✓ *Solvent based product.*
- ✓ *Ideal for difficult substrates.*
- ✓ *Very fast drying.*
- ✓ *Avoid removing media affected by infiltrations.*
- ✓ *Solidity and flexibility.*

POLYMER ULTRA

- ✓ *Based on moisture-hardening silanes.*
- ✓ *Breathable.*
- ✓ *It works in push and counter-thrust.*
- ✓ *Very fast drying.*
- ✓ *It has 100% dry residue.*

OUR EXPERIENCE AT THE SERVICE OF THE FUTURE

Founded in 1992, after more than twenty years of intense research into liquid waterproofing agents: bituminous, acrylic and cementitious, Cimar has completed its product range with the polyurethane line. In addition to its core business of liquid waterproofing, Cimar offers its customers a wide range of protective agents and primers that guarantee the maximum effectiveness of every waterproofing system, on any type of substrate.

Cimar, with an eye to the past and one to the future, offers its customers:

- **Production stability, proven over time.**
- **Constant innovation, which allows you to approach and solve the delicate problems related to water protection.**

Cimar for the environment

90% of Cimar products are obtained in water emulsion and do not impact the environment. Compared to traditional solvent-based products, water-based products have significant advantages, both from an ecological point of view and in terms of transport and storage.

The Cimar logo, featuring the word "Cimar" in a black, cursive script font. Above the "i" is a red dot. A registered trademark symbol (®) is at the end of the word. The logo is reflected on the surface below.

EXTRALARGE

bituminous waterproofing

WITH UNIPOL-SAI
over 400 m²

THE BETTER ALTERNATIVE TO MEMBRANE ROLLS

Bituminous liquid waterproofing membrane. Compared to the usual membrane rolls, Extralarge has considerable advantages: it doesn't require open flame for application, it is a monolithic system, it guarantees greater elasticity and resistance, it eliminates costs of removing and disposing of old membrane rolls and restores their waterproofing properties. The civil liability related to product defects can be guaranteed for 10 years with Unipol-Sai policy, upon request of the applicator, for applications over 400 m²

Primer: water or solvent based bituminous primer.

Supports
any type

Consumption
2 - 2,3 Kg/m² applied in two layers

Equipment
brush, spatula, roller and airless

Dilution
dilution with water: max 5%

Also available in cartridge.

EN 1504-2

maximum dilution 5%

DEFENDS YOUR FOUNDATIONS

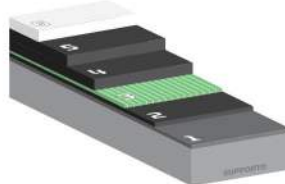

The liquid bituminous water-based waterproofing membrane Extralarge can be enriched with special rubber granules (Strong version) that make it more suitable to stress, puncturing, cutting and compression, compared to its standard version. Moreover, Extralarge is also available in "root-resistant version" particularly suitable for the protection of foundations, walls against the ground, gardens and flower boxes.

INTEGRATED WATERPROOFING SYSTEMS

Thanks to the synergy between Extralarge and other Cimar products, it is possible to create Reflective, Walkable and Underfloor waterproofing systems

Application Standard:

- 1... Primer 70 Metri
- 2... Extralarge (used as a fabric glue)
- 3... Potenzio (Cimar armour tissue)
- 4... Extralarge (first coat)
- 5... Extralarge (second coat)
- 6... Cimar Protective / Coating

CE Membrana GOLD

EN 1504-2

WITH UNIPOL-SAI
over 400 m²

GUARANTEES WATER RESISTANCE OVER TIME

Liquid waterproofing cover, enriched with resins and additives that make it waterproof and durable. It is used for waterproofing terraces, water ducts, sheets, plasters and for restoring the imperviousness of worn-out membrane rolls. Resistant to water stagnation and ultraviolet rays. Does not fear low temperatures, guarantees flexibility and durability down to -20°C. It is certified for asbestos encapsulation (report n° 127344 Istituto Giordano).

Primer: Primer C or Membrana Gold diluted 30-35% with water.

magika

WITH UNIPOL-SAI
over 400 m²

MAXIMUM STRENGTH AND FLEXIBILITY

Magika is an innovative product that allows the application waterproofing with high mechanical resistance. It can be applied even in adverse weather conditions thanks to its very fast drying time. It is also resistant to very low temperatures, down to -40°C. Resistant to water stagnation, it can also be applied on flat surfaces. **Primer:** on concrete, wood, metal, pvc, slate and tiles, apply a first coat of product of 2-300 gr/m² diluted with KSOL specific solvent.

Starglass

Reflective waterproofing

IMPERVIOUS TO WATER, REFLECTIVE TO SUNSHINE

Liquid acrylic waterproofing with a high solar reflectance index (greater than 105 SRI). The high reflectance index contributes to heat reduction absorbed by the substrate and mitigates the temperature inside buildings by lowering it by an average of 5-6°C, thus promoting significant energy savings. STARGLASS is self-cleaning.

Primer: Primer C or Starglass diluted 20-25% with water.

THE BREATHING WATERPROOF

THE FUTURE IS ALREADY HERE!

Polyurethane waterproofing membrane, elastic and coloured. Our Poligold is a breathable and walkable product, offering great resistance to adverse weather conditions and the hot/cold cycle. It maintains its properties from +80°C to -20°C. Resistant to water stagnation. It ensures a minimum durability of 7 years; additional 5 years are guaranteed with another layer of product. It guarantees natural transpiration on supports as wood and cement.

Primer: Poligold diluted 30-35% with water.

Mix 16-20% with water.

WATERPROOF ADDITIVE FOR CEMENTITIOUS MORTARS - WATER REPELLENT

Additive used to waterproof and add flexibility to cement mortars and concretes.

The substrate, as well as the reinforcement iron, will be therefore protected against aggressive and pollutants rain. Mixed with plasters and mortars, it improves breathability and blocks efflorescence migration, eliminating it from the surface. Idrostop does not change the setting and drying times of mortars.

Additive for

cementitious mortars and concrete

SHINES AND LASTS OVER TIME

Brillo is a fast-drying, solvent-based aluminium paint with high reflective qualities. Its high performance is due to the high percentage of aluminium paste used, its high quality and the use of pure solvents. It protects prefabricated and non-prefabricated bituminous membranes from the deteriorating action of ultraviolet rays and other atmospheric agents, extending their life and performance. It is also valid as a protection for tanks and external pipes.

THE ALTERNATIVE TO BITUMINOUS PRIMERS

Primer C is an acrylic glue, based on styrene resins, obtained in water emulsion, ideal for gluing insulation panels in polystyrene and polystyrene on plasterboard. Very useful to prevent the detachment, or to proceed to the anchoring of the slate flakes from the prefabricated sheets. It can also be used as a primer on cementitious surfaces before using cementitious products on them (cast and prefabricated concrete walls), i.e. before applying gypsum-based finishes. It is the ideal adhesion promoter for all Cimar acrylic membranes.

Supports

SUPERK

FLOORING ADHESIVE

SUPER K is a special adhesive based on mixed alloys (cement and resins) classified C2 TE S1 Maxi, designed and realized for the installation of tiles on the liquid fiber reinforced membrane (Membrane Gold FR) and on the cement based membrane (BIGUM) of Cimar. Therefore it gives the same performance on any type of support, also radiant floors and insulating panels.

Supports

Waterproofed surfaces, radiant floors and insulating panels

Consumption

5 Kg/m²

Equipment

toothed spatula

Price List

25 Kg.....€ 30,00/Pc

Colour

grey

knead with water

BITUMINOUS SOLVENT-BASED ADHESIVE

Excellent for cold application of prefabricated bituminous membranes. The cold application system eliminates the inconvenience of using open flames and makes it possible to carry out specific repairs, too. It reduces the negative effects of any cracks in the substrate by creating an intermediate waterproof layer between the substrate and the waterproofing membrane, thus making it easier to identify any water leaks. The use reduces the tension generated by sudden changes in temperature on the visible surfaces and the formation of creases.

Supports

concrete, bituminous membrane, wood, expanded polyurethane, rock wool, expanded perlite

Consumption

1- 1,2 Kg/m²

Equipment

toothed spatula or long handle spatula

Price List

18 Kg.....€ 4,60/Kg

Colour

IDROGENIUS

SAVE YOUR FLOOR, DON'T REMOVE IT

It acts by penetrating into the porosity of the support with the formation of a water-repellent, invisible, vapour-permeable, microporous membrane. This barrier, sealing the macropores, determines the water repellency of the support to the rainwater; since it does not block the micropores, it allows the passage of steam. Specific for ceramic, stoneware, stone, klinker, terracotta, concrete, reinforced concrete and wood floors, it permeates the substrate by creating a breathable, water-resistant barrier.

Supports

ceramic, stoneware, stone, klinker, terracotta, concrete, reinforced concrete and wood floors.

Consumption

Values on different surfaces for 1 Lt of product
very porous surfaces approx. 10 m² (concrete, etc.)
medium porous surfaces approx. 15 m² (tiles, stoneware, etc.)
slightly porous surfaces approx. 25 m² (klinker, etc.)

Equipment

brush, roller, airless

Price List

1 Lt.....€ 47,00/Pz

Potenzio

It is fabric made 100% with special polyester fibres:

- hypoallergenic
- indecomposable
- weatherproof
- adaptable to all surfaces.

POTENZIO provides a valid help as a liquid waterproofing reinforcement. Thanks to its flexibility, it ensures excellent adaptation to the surfaces to be treated, and with its extreme permeability it forms a single body with the waterproof liquid.

It is a universal reinforcement fabric for the liquid sheaths produced by Cimar.

It can be applied both as a reinforcement of our liquid membranes and as a protection and porous support to facilitate the adhesion of the adhesive of the new flooring on the waterproofing system applied.

It is supplied in rolls 1 m high per 100 m long and 20 cm high per 50 m long.

POTENZIO BANDELLA ELASTICA

Features:

Special textile-reinforced elastomer tape with fabric - Very elastic, resistant to ageing and tearing
Compatible with commercially available tile adhesives and all other adhesives
Cimar liquid waterproofers.

Areas of application: Reinforcement of edges, corners and expansion joints.

Technical data:

Overall width [mm] ~ 120
Coating width [mm] ~ 70
Overall thickness [mm] ~ 0,6
Burst pressure [bar] ~ 3
Max. longitudinal drive with a test length of 15 mm [N] ~ 115
Max. transverse drive with a test length of 15 mm [N] ~ 30
Elongation at break, longitudinal [%] ~ 25
Elongation at break, transverse [%] ~ 140
Thermal resistance from/to [°C] - 30 / + 90

POTENZIO FIBRA

Needled glass fiber from 300 gr/m². Our Potenzio Fibra, applied with Primer Fibra, thanks to the glass fibre solidity, and the adhesion qualities of Primer Fibra is the ideal basis to consolidate difficult substrates, thus preparing the substrate for the subsequent laying of the waterproofing product.

Performance:

- excellent compatibility with water-based acrylic or polyurethane membranes;
- good tensile strength with flexibility;
- highly soluble resin-based binder;
- excellent fibre distribution;
- uniformity of weight;
- excellent translucency.

PRICE LIST

POTENZIO 20 cm x 50 m € 55,00/roll
1 m x 100 m € 185,00/roll

POTENZIO FIBRA € 12,80/Kg

POTENZIO BANDELLA € 102,00/Pc
1Pc=7cm/50m

Speedy

AVOIDS RUN-OFFS

Speedy is an accelerator used to allow the application of Cimar waterproofing membranes even in adverse weather conditions, as temperatures below 5°C and humidity up to 95%. The product creates a protective film on the surface of the coating in order to protect it from rain and atmospheric agents, in the first delicate hours after application.

Use as an additive for
